

STEP THERAPY CRITERIA

This list is current as of 10/01/2022 and pertains to Independent Health's 2022 MediSource and Child Health Plus Formulary.

In some cases, Independent Health requires that you first try certain medications to treat your medical condition before we will cover another medication for that condition. Step therapy is a way to help you get the best quality and value from your prescription medication benefit. This usually means that an equally effective generic medication is prescribed before a more expensive brand-name medication. Step therapy may also ensure that two medications are used together if they are more effective.

Medications that require Step Therapy have an "ST" in the Notes column of the formulary. This document contains the Step Therapy protocols that are associated with our MediSource and Child Health Plus Formulary.

If you have any questions, please contact our Member Services Department at 1-800-501-3439 or (716) 631-8701, Monday through Friday from 8 a.m. to 8 p.m. TTY users please call 711.

The formulary may change at any time. You will receive notice when necessary.

Allergy Eye Drops

Products Affected

- ALOMIDE SOLUTION 0.1 % OPHTHALMIC

Details

Criteria	A prescription for this allergy eye drop goes through online if the patient's Independent Health prescription history documents that ketotifen ophthalmic was filled within the previous 90 days. Prior authorization is required when the pharmacy profile does not meet this criteria.
