## Medicare Part B Step Therapy

- Some medically administered Part B medications, like injectable drugs or biologics, may have special requirements or coverage limits, such as step therapy.
- Step therapy requires a trial of a preferred drug to treat a medical condition before covering a non-preferred drug.
- The step therapy requirement does not apply to members who have already received treatment with the non-preferred drug within the past 365 days.
- Both preferred and non-preferred drugs may still be subject to prior authorization or quantity limits.
- The step therapy criteria outlined in this document may also involve a combination of Part B and Part D drugs. For example, we may not cover a Part B drug unless you try a Part D drug first. Or we may not cover a Part D drug unless you try a Part B drug first. This is dependent on the therapy described to treat your medical condition. This document contains the Step Therapy protocols for Medicare Part B drugs that are associated with your plan.

## How Step Therapy Works

In the list below, you'll see drugs labeled as either Step 1 (Preferred drug), Step 2 (Non-Preferred drug) or Step 3 (Non-Preferred drug). Step 2 and Step 3 drugs require step therapy.

For example: Before you can get a Step 3 drug, you have to first try a Step 1 and a Step 2 drug.

**Step 1** drugs usually require prior authorization. That means before you can take this drug, your doctor has to send us information that explains why you need it. If a Step 1 drug doesn't require prior authorization, we tell you in the list below.

**Step 2** drugs always require prior authorization. Your doctor also needs to let us know one of the following:

- Why the Step 1 drug didn't work for you or why you can't take the Step 1 drug
- Why the Step 2 drug is best for your needs
- Details from your doctor to show that you've taken the Step 2 drug in the past 365 days

**Step 3** drugs always require prior authorization. Your doctor also needs to let us know one of the following:

- Why the Step 1 and Step 2 drugs didn't work for you or why you can't take them.
- Why the Step 3 drug is best for your needs
- Details from your doctor to show that you've taken the Step 1 and/or the Step 2 drug in the past 365 days

The drugs within this list may change at any time. You will receive notice when necessary.
