

Prior Authorization Detail

Updated on 12/1/2025

Selected Formulary: 2025 Health Options Duals | CMS Formulary ID: 00025515 | CMS Version: 20

			•	In	1					In the
				Required Medical	l					Prerequisite Therapy
Group	Indication Indicator	Off-Label Uses	Exclusion Criteria	Information	Age Restriction	Prescriber Restriction	Coverage Duration	Other Criteria	Part B Prerequisite	Required
ABOBOTULINUMTOXINA	1 - All FDA-approved			Diagnosis.			12 months	For reauthorization:	0	0
(DYSPORT)	Indications.							documentation from		
								prescriber indicating		
								stabilization or improvement		
								in condition.		
ACITRETIN (SORIATANE)	1 - All FDA-approved			Diagnosis. Must have a trial of	•		12 months		0	0
	Indications.			methotrexate or cyclosporine						
				with inadequate response or						
				significant side effect/toxicity						
				or have a contraindication to						
				these therapies.						
ADALIMUMAB (HUMIRA)	Pending CMS Review		Coverage is not provided for	Diagnosis. For rheumatoid	Member must be 2 years of	By or in consultation with a	12 months	For hidradenitis suppurativa	0	0
			use of once weekly doses of	arthritis (RA): history of trial	age or older.	rheumatologist,		(HS): moderate to severe		
			Humira in combination with	and failure, contraindication,		gastroenterologist,		disease with 3 active		
			methotrexate.	or intolerance to a 3 month		ophthalmologist, or		abscesses, inflammatory		
				trial with methotrexate or		dermatologist.		nodules, or lesions. For		
				another DMARD. For juvenile				uveitis: trial of a corticosteroi	d	
				idiopathic arthritis (JIA) with				or immunomodulator with		
				polyarthritis: history of trial				inadequate response or side		
				and failure, contraindication,				effects/toxicities unless		
				or intolerance to a 3 month				contraindicated. For reauth:		
				trial with methotrexate,				must have documentation		
				leflunomide, or sulfasalazine.				from prescriber indicating		
				For JIA with oligoarthritis,				stabilization or improvement		
				enthesitis and/or sacroiliitis:				in condition.		
				history of trial and failure,						
				contraindication, or						
				intolerance to at least a 4						
				week trial of 2 different						
				NSAIDS. For ankylosing						
				spondylitis (AS): history of tria	ıl					
				and failure, contraindication,						
				or intolerance to a 4 week						
				trial each of at least 2 NSAIDs.						
				For plaque psoriasis: minimun						
				BSA involvement of at least						
				3% (not required if on palms,						
				soles, head/neck, genitalia), a						
				history of trial and failure of						
				ONE of the following: 1)						
				topical therapy (e.g.						
				corticosteroid, calcineurin						
				inhibitor, vitamin D analog), 2)					
				phototherapy, 3) systemic	'					
				treatment (e.g. methotrexate

ALIROCUMAB (PRALUENT)	1 - All FDA-approved			Diagnosis. Must have		By or in consultation with a	12 months	HoFH: must be confirmed by	0	0
	Indications.			confirmed diagnosis of		cardiologist, endocrinologist,		genetic testing with functiona	ı	
				heterozygous familial		or lipid specialist		mutation(s) in both LDL		
				hypercholesterolemia (see				receptor alleles or alleles		
				Other Criteria), homozygous				known to affect LDL receptor		
				familial hypercholesterolemia				functionality or have clinical		
				(HoFH, see Other criteria),				diagnosis defined as one of		
				clinical atherosclerotic				the following: untreated LDL		
				cardiovascular disease				greater than 500mg/dL or a		
				(ASCVD, see Other Criteria), or	-			treated LDL-C greater than		
				primary hyperlipidemia. Must				300mg/dL AND either		
				have baseline LDL-cholesterol				xanthoma before 10 years of		
				levels greater than or equal to	,			age or evidence of HeFH in		
				100 mg/dL (w/o ASCVD),				both parents. For ASCVD:		
				70mg/dL (w/ ASCVD), or				must have chart		
				55mg/dl if has extreme risk				documentation confirming		
				designation (see Other				history of at least one of the		
				Criteria). Must have failed to				following: myocardial		
				achieve goal LDL-C reduction				infarction or other acute		
				after a trial of a high intensity				coronary syndromes		
				statin (atorvastatin 40-80mg				(including ST-elevation		
				daily or rosuvastatin 20-40mg				myocardial infarction, non-ST		
				daily) OR 2 moderate-intensity	/			elevation myocardial		
				statins (atorvastatin or				infarction, and unstable		
				rosuvastatin) at the member's				angina), coronary or other		
				maximally tolerated dose OR				revascularization procedure,		
				documentation the member is	5			ischemic stroke or transient		
				determined to be intolerant				ischemic attack,		
				to statin therapy with				atherosclerotic peripheral		
				provider attestation of				arterial disease. For HeFH:		
				intolerance to statin therapy				must have chart		
				consisting of statin related				documentation of one of the		
				rhabdomyolysis or skeletal-				following: A score of greater		
				muscle related symptoms				than 8 using the Dutch Lipid		
ALOSETRON (LOTRONEX)	1 - All FDA-approved		Constipation. Concomitant	Diagnosis. Documentation of	Coverage is provided for	By or in consultation with a	12 months	For reauth: must have	0	0
	Indications.		use of fluvoxamine. Male	chronic IBS symptoms	members 18 years of age and	Gastroenterologist		documentation from		
			gender. History of chronic or	diarrhea lasting at least 6	older.			prescriber indicating		
			severe constipation or	months. Gastrointestinal tract				stabilization or improvement		
			sequelae from constipation,	abnormalities have been ruled	i			in condition.		
			intestinal obstruction,	out. Must have trial of						
			stricture, toxic megacolon,	loperamide and dicyclomine						
			gastrointestinal perforation	used in the treatment of IBS-D						
			and/or adhesions, ischemic	with inadequate response or						
			•	significant side effects/toxicity	<u>/</u>					
			circulation, thrombophlebitis,	unless contraindicated						
			or hypercoagulable state,							
			Crohn's disease, ulcerative							
			colitis, diverticulitis, or severe							
			hepatic impairment.							
ALPELISIB (VIJOICE)	1 - All FDA-approved			_	Coverage is provided for	By or in consultation with an	12 months	For reauthorization: must	0	0
	Indications.			Overgrowth Spectrum (PROS)		appropriate specialist		have documentation from		
				confirmed by genetic testing.		depending on the symptoms		prescriber indicating		
				Disease must be severe or life	-	and part of the body that are		stabilization or improvement		
				threatening and require		affected.		in condition.		
				systemic treatment.						

				Required Medical						Prerequisite Therapy
Group	Indication Indicator	Off-Label Uses	Exclusion Criteria	Information	Age Restriction	Prescriber Restriction	Coverage Duration	Other Criteria	Part B Prerequisite	Required
ALPHA-1 PROTEINASE INHIBITOR (PROLASTIN)	1 - All FDA-approved Indications.		Immunoglobulin A (IgA) deficient members with antibodies against IgA	Diagnosis. Member must have pre-treatment serum levels of alpha-1 antitrypsin (AAT) that are less than 11 micromoles per liter (80 milligrams per deciliter if measured by radial immunodiffusion or 57 milligrams per deciliter if measure by nephelometry) consistent with phenotypes PiZZ, PiZ (null) or Pi (null, null)	f members 18 years of age and older.	By or in consultation with a pulmonologist	Initial: 6 months Reauthorization: 12 months	For reauth: documentation of improvement or stabilization of the signs and symptoms of emphysema associated with alpha-1 antitrypsin deficiency including slowed progression of emphysema as evidenced by annual spirometry testing or a decrease in frequency, duration or severity of pulmonary exacerbations		0
				of AAT. Member must have symptomatic emphysema confirmed with pulmonary function testing.						
ALPHA-1 PROTEINASE INHIBITOR (ZEMAIRA)	1 - All FDA-approved Indications.		Immunoglobulin A (IgA) deficient members with antibodies against IgA	Diagnosis. Member must have pre-treatment serum levels or alpha-1 antitrypsin (AAT) that are less than 11 micromoles per liter (80 milligrams per deciliter if measured by radial immunodiffusion or 57 milligrams per deciliter if measure by nephelometry) consistent with phenotypes PiZZ, PiZ (null) or Pi (null, null) of AAT. Member must have symptomatic emphysema confirmed with pulmonary function testing.	f members 18 years of age and older.	By or in consultation with a pulmonologist	Initial: 6 months, Reauthorization: 12 months	For reauth: documentation of improvement or stabilization of the signs and symptoms of emphysema associated with alpha-1 antitrypsin deficiency including slowed progression of emphysema as evidenced by annual spirometry testing or a decrease in frequency, duration or severity of pulmonary exacerbations		
AMBRISENTAN (LETAIRIS)	1 - All FDA-approved Indications.		Pregnancy	Diagnosis. Pulmonary arterial hypertension (PAH) WHO Group I confirmed by chart documentation of right-heart catheterization (RHC) indicating a mean pulmonary arterial pressure greater than 20 mmHg, pulmonary vascula resistance greater than 2 wood units, and mean pulmonary capillary wedge pressure less than or equal to 15 mmHg. If provider indicates RHC is not recommended, must have documentation of an echocardiography.	r	or pulmonologist.	Initial authorization: 3 months Reauthorization: 12 months	from prescriber that demonstrates member is tolerating and receiving clinical benefit from treatment	0	0
AMIKACIN INHALATION (ARIKAYCE)	1 - All FDA-approved Indications.			Diagnosis of Mycobacterium avium complex (MAC) lung disease. Must be used as part of a combination antibacteria drug regimen in patients who do not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy containing at least 2 of the following: a macrolide, a rifamycin (rifampin or rifabutin), and ethambutal.	1	By or in consultation with a pulmonologist or infectious disease specialist	12 months	For reauth: must have attestation confirming presence of a positive sputum culture or that there have been negative sputum cultures for an insufficient period of time (e.g. less than 12 months).	0	0

				Required Medical						Prerequisite Therapy
Group	Indication Indicator	Off-Label Uses	Exclusion Criteria	Information	Age Restriction	Prescriber Restriction	Coverage Duration	Other Criteria	Part B Prerequisite	Required
APREMILAST (OTEZLA)	1 - All FDA-approved			Diagnosis. For Psoriatic	Coverage is provided for	By or in consultation with a	12 months	For reauthorization: must	0	0
	Indications.			arthritis (PsA): for mild to	members 6 years of age or	dermatologist, rheumatologist	:	have documentation from		
				moderate axial or enthesitis,	older.			prescriber indicating		
				must have a history of trial				stabilization or improvement		
				and failure, contraindication,				in condition.		
				or intolerance to a 4 week						
				trial of 2 NSAIDs. For member	s					
				with mild to moderate						
				peripheral disease, must have						
				a history of a trial and failure,						
				contraindication, or						
				intolerance to a 12 week trial						
				with methotrexate or another	•					
				DMARD. For plaque psoriasis:						
				minimum BSA involvement of						
				at least 2% (not required if on						
				palms, soles, head/neck,						
				genitalia), a history of trial and	d l					
				failure of ONE of the						
				following: 1) topical therapy						
				(e.g. corticosteroid,						
				calcineurin inhibitor, vitamin						
				D analog), 2) phototherapy, 3)	1					
				systemic treatment (e.g.						
				methotrexate, cyclosporine,						
				oral retinoids). For Behcet's						
				disease: must have recurrent						
				oral ulceration (at least 3						
				times within the past year)						
				plus 2 of the following						
				symptoms: recurrent genital						
				ulceration, eye lesions, skin						
				lesions, positive pathergy						
				reaction, must have a trial and	1					
ARIMOCLOMOL (MIPLYFFA)	1 - All FDA-approved			Diagnosis. Documentation the	Member is 2 years of age and		12 months	Reauthorization:	0	0
	Indications.			diagnosis was confirmed by	older			Documentation the member		
				genetic testing demonstrating				is experiencing an		
				one of the following: 1. a				improvement or stabilization		
				mutation in both alleles of				in disease.		
				NPC1 or NPC2 OR 2. mutation						
				in one allele and either a						
				positive filipin-staining or						
				elevated cholestance						
				triol/oxysterols (greater than						
				2x ULN). Documentation the						
				member has at least one						
				neurological symptom of NPC						
				(e.g. decrease in motor skills,						
				ataxia, seizures, etc.). Must be						
				using in combination with						
				miglustat. Must not be used in	n					
				combination with Aqneursa.						
ARIPIPRAZOLE TABLET WITH	1 - All FDA-approved			Diagnosis. Documentation the	Coverage is provided for		12 months		0	0
SENSOR (ABILIFY MYCITE)	Indications.				members 18 years of age and					
				month trial of oral aripiprazole						
				(Abilify) therapy.						
-	•	•	•		•	•	•	•	•	•

				Required Medical						Prerequisite Therapy
•	Indication Indicator	Off-Label Uses	Exclusion Criteria	Information		Prescriber Restriction	Coverage Duration	Other Criteria	Part B Prerequisite	Required
ARMODAFINIL (NUVIGIL)	1 - All FDA-approved			Diagnosis. Must have a history		By or in consultation with a		For reauth: documentation of	0	0
	Indications.			of trial and failure,		sleep specialist, ENT (ear,	OSA: 12 months	improvement or stabilization.		
				contraindication, or		nose, and throat specialist),				
				intolerance to modafinil. For		neurologist, or pulmonologist				
				narcolepsy: Sleep Study (e.g.						
				Polysomnogram, Multiple						
				Sleep Latency Test) confirming	g					
				diagnosis. For obstructive						
				sleep apnea: Sleep study (e.g.						
				polysomnogram) confirming						
				diagnosis. For shift work sleep	· [
				disorder (SWSD): must meet						
				International Classification of						
				Sleep Disorders criteria for						
				SWSD (either primary						
				complaint of excessive						
				sleepiness or insomnia						
				temporarily associated with						
				work period that occurs						
				during habitual sleep phase						
				OR polysomnography and						
				Multiple Sleep Latency Test						
				demonstrate loss of normal						
				sleep wake pattern, no other medical or mental disorders						
				account for symptoms, and						
				symptoms do not meet						
				criteria for any other sleep						
				disorder producing insomnia						
				or excessive sleepiness such						
				as time zone change						
				syndrome) and must provide						
				documentation of shift work						
				schedule showing 5 or more						
ATOGEPANT (QULIPTA)	1 - All FDA-approved			Diagnosis. For episodic	Coverage is provided for		Initial: 6 months	For reauth: Provider	n	0
ATOGET ANY (QUELL TA)	Indications.				members 18 years of age and			attestation the member is		
	maleucions.			the member has 4 to 14	older.			having a reduced number of		
				headache days per month. Fo	•			migraine/headache days per		
				chronic migraine: Provider				month or a decrease in		
				attestation the member has a	t			migraine/headache severity. A		
				least 15 headache days per				migraine is defined as a		
				month for 3 or more months				headache that has at least		
				with at least 8 migraine days				two of the following		
				per month. For both: Must				characteristics: unilateral		
				have a trial and failure of one				location, pulsating/throbbing		
				beta-blocker and one				quality, moderate or severe		
				anticonvulsant unless				intensity (inhibits or prohibits		
				contraindicated or intolerant.				daily activities), is aggravated		
								by routine activity, nausea		
								and/or vomiting, photophobia		
								and phonophobia.		
ATRASENTAN (VANRAFIA)	1 - All FDA-approved			Diagnosis of primary		By or in consultation with a		For reauth: must have a	0	0
	Indications.			immunoglobulin A		nephrologist.		decrease from baseline in		
				nephropathy (IgAN) that has	older.			total urine protein or UPCR.		
				been confirmed by biopsy.						
				Must have a total urine						
				protein of at least 1.0 g/day.						
				Must be at risk of rapid						
				disease progression defined a	>					
				having a urine protein-to-						
				creatinine ratio (UPCR) of at						
				least 1.5 g/g. Must have tried						
				and failed a stable and						
				maximum tolerated dose of						
				both 1) an ACE inhibitor or						
				ARB and 2) an SGLT-2 inhibito	r					
	i	Ī	I	(e.g. Farxiga).	İ	i	İ	İ	Ī	Î.

				Required Medical						Prerequisite Therapy
Group	Indication Indicator	Off-Label Uses	Exclusion Criteria	Information	Age Restriction	Prescriber Restriction	Coverage Duration	Other Criteria	Part B Prerequisite	Required
AVACOPAN (TAVNEOS)	1 - All FDA-approved Indications.			Diagnosis of ANCA-associated vasculitis (GPA or MPA). Must be on concurrent therapy with glucocorticoids and immunosuppressants (e.g. cyclophosphamide,	members 18 years of age or n older.	By or in consultation with a rheumatologist, hematologist or oncologist.	12 Months	For reauthorization: documentation from prescriber indicating stabilization or improvement in condition.	0	0
				azathioprine, mycophenolate,						
AVATROMBOPAG (DOPTELET)	1 - All FDA-approved Indications.			rituximab). Diagnosis. For ITP, documentation of inadequate response to corticosteroids or immunoglobulins and documentation of a platelet count less than or equal to 30,000/microliter. For thrombocytopenia in adult patients with chronic liver disease who are scheduled to undergo a procedure, documentation of a platelet count less than 50,000/microliter.		By or in consultation with a hematologist, oncologist, hepatologist, or surgeon	Thrombocytopenia in patients with chronic liver disease: 1	For reauth of chronic ITP: documentation of improvement in platelet count from baseline.	0	0
B VS. D	3 - All Medically-accepted						NA		0	0
	Indications.									
BECAPLERMIN (REGRANEX)	1 - All FDA-approved Indications.		Treatment of pressure ulcers and venous stasis ulcers. Use on exposed joints, tendons, ligaments, and bone.	Diagnosis. Must have a lower extremity diabetic neuropathic ulcer that extends into the subcutaneous tissue or beyond and have an adequate blood supply. Must be used as adjunctive therapy to good ulcer care practices (i.e. debridement, infection control, pressure relief).			3 months	For reauth: documentation of improvement or stabilization.	0	0
BEDAQUILINE (SIRTURO)	1 - All FDA-approved Indications.			Diagnosis. Must have either inadequate response to a first line tuberculosis (TB) regimen containing isoniazid and rifampin OR chart documentation of resistance to isoniazid and rifampin per susceptibility testing. Must weigh at least 15 kg. Must be used in combination with at least 3 other drugs indicated for the treatment of TB.	- age or older.	By or in consultation with a pulmonologist or infectious disease specialist	6 months			0
