

January 2025 Formulary & Utilization Management Changes

Effective January 1, 2025, there will be an enhancement in coverage of certain medications for Commercial and Healthcare Reform members.

- The medications outlined in Table 1 are changing tier, and/or may now require Step Therapy (ST), Prior Authorization (PA), or be subject to a Quantity Limit (QL). Some medications are being added to the Specialty Pharmacy Copay drug list.
 - Single-source brand deletions and new Utilization Management requirements for fully-insured members in New York will instead occur upon renewal date.
- The medications listed below in Table 2 are being removed from the PrevenRx Premier and PrevenRx Value Drug Lists, which may be used by Select Plans. Drug which are on these lists have the deductible bypassed, if applicable, and may modify base cost share, if applicable. As a result of removal from the list, the drugs will become subject to the deductible and base cost share will apply. The removal of these medications from the drug lists will be effective 1/1/2025, however current utilizers will not be impacted until their group renewal date in 2025 starting on 1/1/2025 or later.

UPPER CASE= brand name drug

lower case= generic drug
