

Prior Authorization Criteria

Noncirrhotic metabolic dysfunction– associated steatohepatitis (MASH) Agents

All requests for Noncirrhotic metabolic dysfunction– associated steatohepatitis (MASH) Agents require a prior authorization and will be screened for medical necessity and appropriateness using the criteria listed below.

Noncirrhotic metabolic dysfunction– associated steatohepatitis (MASH) Agents include: Rezdiffra (resmetirom).

Coverage may be provided with a diagnosis of noncirrhotic metabolic dysfunction– associated steatohepatitis (MASH) and all of the following criteria is met:

- Is age-appropriate according to FDA-approved package labeling, nationally recognized compendia, or peer-reviewed medical literature
- Must be prescribed by or in consultation with a hepatologist or gastroenterologist
- Documentation the member has received lifestyle counseling on nutrition and exercise and will continue to use in conjunction with the requested medication
- The requested dose and frequency is in accordance with FDA-approved labeling, nationally recognized compendia, and/or evidence-based practice guidelines
- Documentation of a confirmed diagnosis of MASH with fibrosis stage 2 or 3 confirmed by **one** of the following within the last 6 months:
 - Liver biopsy confirming steatosis AND ALL of the following:
 - NAFLD Activity Score (NAS) of at least 4
 - A score of at least 1 in each NAS component [i.e., steatosis (scored 0 to 3), ballooning degeneration (scored 0 to 2), lobular inflammation (scored 0 to 3)]
 - One of the following assessments:
 - Serum-based assessment (e.g., fibrosis-4 [FIB-4], NAFLD fibrosis score [NFS], enhanced liver fibrosis test [ELF]);
 - imaging-based assessment (e.g., FibroScan, magnetic resonance-based elastography [MRE], magnetic resonance imaging–proton density fat fraction [MRI-PDFF]);
 - FAST score, as measured by FibroScan and serum aspartate aminotransferase (AST);
 - MAST score, as measured by MRI-PDFF, MRE, and serum AST;
 - MEFIB score, as measured by FIB-4 and MRE
- Member must not have any of the following exclusions:
 - Thyroid diseases including:
 - Active hyperthyroidism
 - Untreated clinical hypothyroidism defined by thyroid stimulating hormone (TSH) >7 IU/L with symptoms of hypothyroidism or >10 IU/L without symptoms
 - Recent significant weight gain or loss
 - HbA1c ≥ 9.0%
 - Presence of cirrhosis on liver biopsy defined as stage 4 fibrosis
 - Diagnosis of hepatocellular carcinoma (HCC)

- MELD score ≥ 12 , unless due to therapeutic anti coagulation
- Hepatic decompensation
- Chronic liver diseases other than NASH
- History of bariatric surgery (within the past 5 years)
- Active autoimmune disease
- Serum ALT > 250 U/L
- Active, serious medical disease with a likely life expectancy less than 2 years
- History of significant alcohol consumption for a period of more than 3 consecutive months within 1 year prior to starting requested therapy
- The member must discontinue use of any medication that may affect NAS or fibrosis stage or regular use of drugs historically associated with NAFLD
- Member has at least 2 metabolic risk factors (e.g., obesity, type 2 diabetes, dyslipidemia, hypertension)
- **Initial Duration of Approval:** 6 months
- **Reauthorization criteria:**
- The member has received a clinical benefit demonstrated by either:
 - the resolution of steatohepatitis and no worsening of liver fibrosis or
 - at least one stage improvement in liver fibrosis and no worsening of steatohepatitis
- The member has documentation of an annual evaluation, including laboratory values since starting treatment, by a hepatologist or gastroenterologist
- Documentation the member continues to diet and exercise in conjunction with the requested medication
- The member continues to not use any medication that may affect NAS or fibrosis stage or regular use of drugs historically associated with NAFLD
- The member does not have any exclusions as listed in the initial review criteria
- **Reauthorization Duration of Approval:** 12 months

Coverage may be provided for any non-FDA labeled indication if it is determined that the use is a medically accepted indication supported by nationally recognized pharmacy compendia or peer-reviewed medical literature for treatment of the diagnosis(es) for which it is prescribed. These requests will be reviewed on a case by case basis to determine medical necessity.

When criteria are not met, the request will be forwarded to a Medical Director for review. The physician reviewer must override criteria when, in their professional judgment, the requested medication is medically necessary.

MEDICAL HISTORY (Complete for ALL requests)

Diagnosis: Noncirrhotic nonalcoholic steatohepatitis (NASH) Other: _____

How was the diagnosis confirmed (please submit chart documentation)?

- Liver biopsy with the past 2 years
- NAFLD Activity Score (NAS) of at least 4
- A score of at least 1 in each NAS component [i.e., steatosis (scored 0 to 3), ballooning degeneration (scored 0 to 2), lobular inflammation (scored 0 to 3)]
- Moderate to advanced liver fibrosis (stages F2 to F3 fibrosis)
- Vibration-controlled transient elastography (VCTE; e.g. FibroScan) with kPa greater than or equal to 8.5 AND controlled attenuation parameter (CAP) greater than or equal to 280 dB.m⁻¹

One of the following biochemical tests for fibrosis:

- PRO-C3 >14 ng/mL
- Enhanced Liver Fibrosis (ELF) greater than or equal to 9

- The member has an MRI-PDFF greater than or equal to 8% liver fat included MRE

Does the member have any of the following (check all that apply):

- Thyroid diseases including active hyperthyroidism or untreated clinical hypothyroidism defined by thyroid stimulating hormone (TSH) >7 IU/L with symptoms of hypothyroidism or >10 IU/L without symptoms
- Recent significant weight gain or loss
- HbA1c ≥ 9.0%
- Presence of cirrhosis on liver biopsy defined as stage 4 fibrosis
- Diagnosis of hepatocellular carcinoma (HCC)
- MELD score ≥12, unless due to therapeutic anti coagulation
- Decompensated cirrhosis Chronic liver diseases other than NASH
- History of bariatric surgery (within the past 5 years)

MEDICAL HISTORY (Complete for ALL requests)- continued

- Active autoimmune disease
- Serum ALT > 250 U/L
- Active, serious medical disease with a likely life expectancy less than 2 years
- History of significant alcohol consumption for a period of more than 3 consecutive months within 1 year prior to starting requested therapy

Will the member be monitored for elevations in liver tests and development of liver related adverse reactions: Yes No

Has the member discontinued any medication that may affect NAS or fibrosis stage or regular use of drugs historically associated with NAFLD? Yes No

Is there documentation the member has received lifestyle counseling on nutrition and exercise and will continue to use in conjunction with the requested medication? Yes No

REAUTHORIZATION

Has the member received a clinical benefit demonstrated by either resolution of steatohepatitis and no worsening of liver fibrosis or

at least one stage improvement in liver fibrosis and no worsening of steatohepatitis? Yes No

Is there documentation of an annual evaluation, including laboratory values since starting treatment, by a hepatologist or gastroenterologist? Yes No

Is there documentation the member continues to diet and exercise in conjunction with the requested medication? Yes No

Does the member continue to not use any medication that may affect NAS or fibrosis stage or regular use of drugs historically associated with NAFLD? Yes No

Does the member have any exclusions to the requested medication? Yes No
